Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on CD, diskette, computer print-out, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct on-line access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and the listed documents should be directed to:

Goods and Services Producing Industries Section, Prices Division.

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9607) or to the Statistics Canada reference centre in:

| Halifax | (1-902-426-5331) | Regina | (1-306-780-5405) |
|----------|------------------|-----------|------------------|
| Montréal | (1-514-283-5725) | Edmonton | (1-403-495-3027) |
| Ottawa | (1-613-951-8116) | Calgary | (1-403-292-6717) |
| Toronto | (1-416-973-6586) | Vancouver | (1-604-666-3691) |
| Winnipeg | (1-204-983-4020) | | |

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou tous les documents énumérés doivent être adressées à:

Section des industries de biens et de services, Division des prix.

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9607) ou au centre de consultation de Statistique Canada à:

| Halifax | (1-902-426-5331) | Regina | (1-306-780-5405) |

Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises et les administrations canadiennes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

Registered Trade Mark of Statistics Canada.

Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'avant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisées et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données pistoriques et des données plus actuelles qui n'apparaissent pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division du marketing, Statistique Canada, Ottawa, K1A 0T6 ou téléphonez à (613) 951-8200.

Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" – "Permanence of Paper for Printed Library Materials", ANSI Z39.48 – 1984.

This publication was prepared under the direction of:

Highlights

Industrial Product Price Index

Based on preliminary data, the Industrial Product Price Index (IPPI, 1986 = 100) was unchanged in January 1994, remaining at December's level of 114.5. However, the year-over-year change in the IPPI decelerated, falling from +3.2% to +2.3%, its lowest value since September 1992.

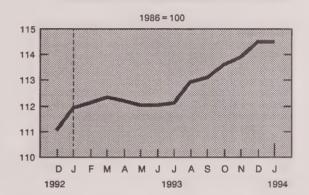

Chart 1 / Graphique 1

Industrial product price index Indice des prix des produits industriels

Faits saillants

Indice des prix des produits industriels

Selon les données provisoires, l'indice des prix des produits industriels (IPPI, 1986 = 100) n'a pas varié en janvier 1994, étant demeuré à son niveau de décembre, soit 114,5. Cependant, la variation d'une année à l'autre de l'IPPI a diminué, passant de +3.2% à +2.3%, son niveau le plus faible depuis septembre

In January, indexes for 11 of the 21 major groups of products increased, three remained unchanged, and seven decreased. The most significant price increases were for primary metal products (+2.2%) and for fruit, vegetable, feed, and miscellaneous food products (+0.8%). These increases were offset by decreases in the indexes for autos, trucks and other transport equipment (-0.4%), petroleum and coal products (-0.9%), and chemicals and chemical products (-0.5%).

Between mid-December 1993 and mid-January 1994, the value of the U.S. dollar declined 0.9% against the Canadian dollar, decreasing the value of export prices quoted in U.S. dollars. This particularly affected the following indexes: automobiles, trucks and other transport equipment; paper and paper products; and, to a lesser extent, lumber, sawmill and other wood products. In January 1994, the U.S. dollar was 3.0% higher against the Canadian dollar than in January 1993.

The overall decline in the year-over-year change in the IPPI resulted from declines in the year-over-year changes for second-stage intermediate goods, finished foods and feeds, capital equipment, and other finished goods. In all four cases, the change was less than in any month of 1993. The only category where there was En janvier, les indices de 11 des 21 grands groupes de produits ont progressé, trois sont demeurés stables et sept ont reculé. Les hausses de prix les plus significatives sont celles des produits métalliques primaires (+2.2%) et des fruits, des légumes, des aliments pour animaux et des autres produits alimentaires (+0.8%). Ces augmentations ont été compensées par des diminutions des indices des automobiles, des camions et d'autre matériel de transport (-0.4%), du pétrole et des produits du charbon (-0.9%), et des produits chimiques (-0.5%).

De la mi-décembre 1993 à la mi-janvier 1994, la valeur du dollar américain a diminué de 0,9% par rapport au dollar canadien, ce qui a eu pour effet de faire baisser la valeur des prix à l'exportation exprimés en dollars américains. Cela a influé tout particulièrement sur les indices de prix des automobiles, des camions et d'autre matériel de transport, sur ceux du papier et des produits connexes, et, dans une moindre mesure, sur ceux des sciages, des produits de scierie et des divers produits du bois. En janvier 1994, le dollar américain était de 3,0% supérieur au dollar canadien par rapport à janvier 1993.

Le repli global de la variation d'une année à l'autre de l'IPPI est attribuable aux diminutions des variations d'une année à l'autre des produits semi-finis de deuxième étape, des aliments de consommation et des aliments pour animaux, du matériel capitalisé et des autres produits finis. Dans ces guatre cas, la variation était inférieure à celle de tout autre mois en 1993.

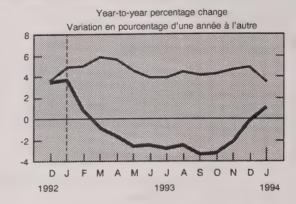

Industrial product price index indice des prix des produits industriels

First-stage intermediate goods

Produits semi-finis de première étape

Second-stage intermediate goods

Produits semi-finis de deuxième étape

an increase in the year-over-year change in prices was for first-stage intermediate goods.

The index for first-stage intermediate goods continued to increase in January, rising by 1.2% after December's increase of 1.8%. Consequently, January's year-over-year change for first-stage intermediate goods' prices went from -0.3% to +1.0%. The most important contributors were the non-ferrous primary metals, as noted below. Pulp prices also contributed, rising by 1.7%.

The year-over-year change in second-stage intermediate goods, however, continued to decline, falling from +4.8% to +3.4%. The month-to-month change in the index declined to -0.1% from +0.6% in December and +0.9% in November. For finished goods, the year-over-year change in prices also continued to decline in January, falling to +1.7%. The year-over-year change in all three major finished goods categories has been

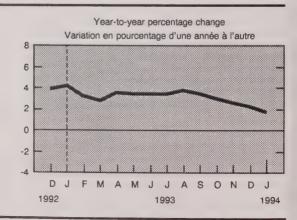

L'unique catégorie où l'on constate une hausse de la variation d'une année à l'autre des prix est celle des produits semi-finis de première étape.

L'indice des prix des produits semi-finis de première étape a continué de progresser en janvier, augmentant de 1,2% après s'être accru de 1,8% en décembre. Conséquemment, la variation d'une année à l'autre des produits semi-finis de première étape en janvier soit passée de -0,3% à +1,0%. À ce chapitre, les éléments les plus importants sont les métaux de première transformation non ferreux dont il est question cidessous. La hausse de 1,7% des prix de la pâte a également joué un rôle à cet égard.

La variation d'une année à l'autre des produits semi-finis de deuxième étape a toutefois continué à fléchir, passant de +4,8% à +3,4%. La variation d'un mois à l'autre de l'indice a régressé pour s'établir à -0,1%, comparativement à +0,6% en décembre et à +0,9% en novembre. Pour les produits finis, la variation d'une année à l'autre des prix a également continué à décroître en janvier, s'établissant à +1,7%. Dans les trois principales catégories de produits finis, la variation d'une année

Chart 3 / Graphique 3

All finished goods price index indice des prix de tous les produits finis

declining for some time — foods and feeds since October 1993 and capital equipment and other finished goods since August 1993. In January, the year-overyear change in the foods and feeds index fell from +1.5% in December to +1.4%, the same value as August 1992. The change in the capital equipment index fell from +3.5% to +2.6%, and the change in other finished goods fell from +1.8% to +1.3%.

In January, the month-to-month change in the finished goods index was -0.2%. Although the foods and feeds index rose by 0.2% in January, the gain was more than offset by the declines in capital equipment (-0.3%) and other finished goods (-0.2%).

The primary metal products price index rose 2.2% in January. This rise was primarily due to price increases for primary aluminum products (+4.3%), primary copper products (+6.2%), and primary nickel products (+9.7%). The price increases in primary aluminum and nickel products coincided with producers' current and planned reductions in output. Cobalt also contributed to the increase in primary non-ferrous metal prices, jumping 48.6% — the result of unrest in Zaire, one of the main producing regions.

The automobiles, trucks, and other transport equipment price index declined 0.4% in January. The decline was almost completely attributable to the increase in the value of the Canadian dollar as the export automobiles index declined 0.7%. This effect was partly offset by domestic automobile prices, which rose by 0.8%.

The 0.8% increase in the fruit, vegetable, feed and miscellaneous food index resulted from price increases in bakery goods, feeds, and vegetable oils — following increases in raw material input prices.

The petroleum and coal products price index continued to decline, falling 0.9% as the gasoline and fuel oil price index fell 1.3%. The petroleum and coal products price index was 9.1% below a year earlier, while the gasoline and fuel oil price index was down 9.8%.

The 0.5% decline in the chemicals and chemical products index primarily resulted from a 6.8% decline in ethylene prices. Ethylene prices, however, remained 36.3% higher than in January 1993.

à l'autre est en baisse depuis un certain temps, le repli des aliments et aliments pour animaux étant amorcé depuis octobre 1993 et celui du matériel capitalisé et des autres produits finis, depuis août 1993. En janvier, la variation de l'indice des aliments de consommation et des aliments pour animaux a diminué, passant de +1,5% en décembre à +1,4%, soit le même niveau qu'en août 1992, tout comme celle de l'indice du matériel capitalisé d'équipement qui est passée de +3,5% à +2,6% et celle des autres produits finis qui est passée de +1,8% à +1,3%.

En janvier, la variation d'un mois à l'autre de l'indice des produits finis diminuait de -0,2%. La hausse de 0,2% de l'indice des aliments et des aliments pour animaux en janvier a été plus que compensée par la baisse de -0,3% de l'indice du matériel capitalisé et par celle de -0,2% de l'indice des autres produits finis.

L'indice des prix des produits métalliques primaires a augmenté de 2,2% en janvier. Cette hausse est surtout attribuable aux augmentations des prix des produits de l'aluminium de première transformation (+4,3%), des produits du cuivre de première transformation (+6,2%), et des produits du nickel de première transformation (+9,7%). L'accroissement des prix des produits de l'aluminium et du nickel de première transformation a coı̈ncidé avec les réductions du rendement courantes et prévues des producteurs. Le cobalt a également contribué à la hausse des prix des métaux de première transformation non ferreux, progressant de 48,6% en raison des troubles au Zaı̈re, l'un des principaux pays producteurs.

L'indice des prix des automobiles, des camions et d'autre matériel de transport s'est replié de 0,4% en janvier. Cette diminution est presque entièrement attribuable à la hausse de la valeur du dollar canadien, l'indice des automobiles destinées à l'exportation ayant diminué de 0,7%. Elle a été partiellement compensée par la hausse de 0,8% des prix des automobiles vendues au pays.

La progression de 0,8% de l'indice des fruits, des légumes, des aliments pour animaux et des autres aliments est attribuable à l'augmentation des prix des produits de boulangerie, des aliments pour animaux et des huiles végétales qui fait suite à des hausses des prix des matières premières.

L'indice des prix du pétrole et des produits du charbon a continué à se replier, en baisse de 0,9%, l'indice des prix de l'essence et du mazout ayant diminué de 1,3%. L'indice des prix du pétrole et des produits du charbon était inférieur de 9,1% au niveau de l'année précédente, tandis que celui des prix de l'essence et du mazout a reculé de 9,8%.

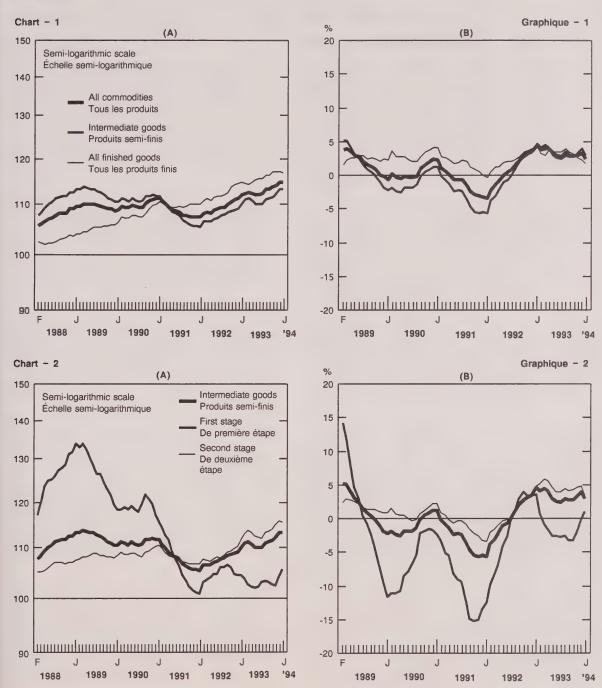

La baisse de 0,5% de l'indice des produits chimiques est principalement attribuable à la diminution de 6,8% des prix de l'éthylène. Ces derniers étaient toutefois supérieurs de 36,3% à ceux de janvier 1993.

Highlights

Raw Materials Price Index

Preliminary data indicate that the Raw Materials Price Index (RMPI, 1986 = 100) rose 2.3% in January 1994 to a level of 110.2. This increase followed four months of declines and marked the highest monthly increase since June 1992. Major contributors to this change were price increases of 4.9% for mineral fuels, 1.9% for animals and animal products, and 3.4% for non-ferrous metals. There were no decreases in any other components. The RMPI excluding mineral fuels increased 1.6%.

In January, the RMPI was up 1.8% from January 1993. The higher index was due to increases in five of the seven components, significantly offset by a decline in mineral fuel prices (-16.6%). The main price increases were in wood (+25.0%), vegetable products (+12.4%) and ferrous materials (+20.6%). In January, the RMPI excluding the mineral fuels component was up 9.6% from January 1993.

The mineral fuels index was up 4.9% in January 1994, reflecting the 5.8% increase in crude oil prices. This increase was slightly offset by lower coal prices (-5.2%). Despite this increase, the mineral fuels index was 16.6% lower than the January 1993 level, as crude oil prices were 18.3% lower than a earlier. However, natural gas prices were 15.6% higher.

The non-ferrous metals index increased 3.4% in January, after a 5% increase in December. Major price increases were noted in copper concentrates (+6.7%), nickel concentrates (+10.0%) and aluminum materials (+5.9%). This increase in aluminum prices reflected a tentative agreement amongst North American, European, and Commonwealth of Independent States' producers to limit production in the coming year. The non-ferrous metals index showed no change from a year earlier, due mainly to offsetting price changes for gold (+23.1%) and copper concentrates (-10.3%).

Wood prices edged up again in January (+0.6%), after increasing by a total of 2.6% in November and December 1993. Year-to-year price increases for wood have been decelerating in general since May 1993 (+43.4%) to their present level in January 1994 (+25.0%). Price increases for softwood logs (+31.7%) were major contributors to the year-over-year movement in wood prices.

Faits saillants

Indice des prix des matières brutes

Selon les chiffres provisoires, l'indice des prix des matières brutes (IPMB, 1986 = 100) a augmenté de 2,3% en janvier 1994 pour atteindre un niveau de 110,2. Cette hausse fait suite à quatre mois de baisse de l'IPMB et constitue la plus forte augmentation mensuelle depuis juin 1992. Cette variation est principalement attribuable aux majorations de prix de 4,9% pour les combustibles minéraux, de 1,9% pour les animaux et les substances animales, et de 3,4% pour les métaux non ferreux. Aucune des autres composantes n'a affiché de recul. L'IPMB, à l'exclusion des combustibles minéraux, s'est accru de 1,6%.

En janvier, l'IPMB a monté de 1,8% par rapport à janvier 1993. La hausse de l'indice s'explique par les augmentations enregistrées dans cinq des sept composantes et grandement neutralisées par une diminution des prix des combustibles minéraux (-16,6%). Les principales hausses des prix ont été observées pour le bois (+25,0%), les substances végétales (+12,4%), et les matières ferreuses (+20,6%). L'IPMB, sauf la composante des combustibles minéraux, a progressé de 9,6% en janvier comparativement à janvier 1993.

L'indice des combustibles minéraux s'est accru de 4,9% en janvier 1994, ce qui traduit la hausse de 5,8% des prix du pétrole brut. Cette augmentation a été légèrement atténuée par la diminution des prix du charbon (-5,2%). Malgré cette progression, l'indice des combustibles minéraux était inférieur de 16,6% au niveau enregistré en janvier 1993, les prix du pétrole brut étant inférieurs de 18,3% à ceux d'un an plus tôt. Toutefois, les prix du gaz naturel ont monté de 15,6%.

L'indice des prix des métaux non ferreux a continué de monter en janvier, progressant de 3,4%, comparativement à la majoration de 5% en décembre. Les principales augmentations des prix ont été observées pour les concentrés de cuivre (+6,7%), les concentrés de nickel (+10,0%), et les matières d'aluminium (+5,9%). Cette montée des prix de l'aluminium traduit les effets de l'accord provisoire entre les producteurs de l'Amérique du Nord, de l'Europe et de la Communauté des États Indépendants en vue de limiter la production au cours de cette année. L'indice des métaux non ferreux est essentiellement demeuré au niveau d'il y a un an, en raison surtout des variations de prix divergentes entre ceux de l'or (+23,1%) et ceux des concentrés de cuivre (-10,3%).

Les prix du bois ont monté légèrement en janvier (+0,6%), après une hausse globale de 2,6% en novembre et en décembre 1993. Les augmentations d'une année à l'autre des prix du bois s'amenuisent de façon générale depuis mai 1993 (+43,4%) pour se situer à leur niveau actuel en janvier 1994 (+25,0%). Les majorations du prix des billes de résineux (+31,7%) ont été les principales causes de la variation d'une année à l'autre des prix du bois.

Vegetable product prices increased in January (+0.9%), primarily due to higher prices for canola (+13.3%) and corn (+3.0%). Year-over-year vegetable product prices were up 12.4%. Major price increases were noted in wheat (+26.9%), canola (+21.4%), corn (+21.8%) and soybeans (+21.9%). Significantly higher prices for canola and soybeans were caused by lower inventories and strong global demand for vegetable oils.

The animals and animal products index increased by 1.9% in January, the largest monthly increase since December 1992. Higher prices for hogs (+8.8%) and cattle-for-slaughter (+1.7%) were mostly responsible for the overall increase. The year-over-year change in the index (+1.3%) resulted from contrasting price changes. Hog prices were up 13.7%, whereas cattle-for-slaughter prices declined 4.8% from a year earlier.

Ferrous material prices have risen since December 1992, increasing 1.0% in January 1994, and were up 20.6% from a year earlier. Price increases for iron and steel scrap have been mainly responsible for the changes in the ferrous materials index. Iron and steel scrap prices were up 2.5% in January and, compared with a year earlier, were almost 40% higher.

Les prix des substances végétales se sont accrus en janvier (+0,9%), en raison surtout de la montée des prix du canola (+13,3%) et du maïs (+3,0%). D'une année à l'autre, les prix des substances végétales ont progressé de 12,4%. Les principales augmentations de prix ont été observées pour le blé (+26,9%), le canola (+21,4%), le maïs (+21,8%) et le soja (+21,9%). Les très fortes hausses des prix du canola et du soja ont été provoquées par une baisse des stocks et une forte demande globale en huiles végétales.

L'augmentation de l'indice des prix des animaux et des substances animales en janvier (+1,9%) était la plus importante progression mensuelle depuis décembre 1992. L'accroissement des prix des porcs (+8,8%) et des bovins d'abattage (+1,7%) était la cause principale de la hausse globale. La variation d'une année à l'autre de l'indice (+1,3%) est le résultat de variations de prix contrastantes. Les prix des porcs ont monté de 13,7%, alors que ceux des bovins d'abattage ont descendu de 4,8% par rapport à un an plus tôt.

Les prix des matières ferreuses sont à la hausse depuis décembre 1992; ils ont augmenté de 1,0% en janvier 1994 et de 20,6% par rapport à un an plus tôt. Les majorations des prix pour les déchets du fer et de l'acier sont les causes principales des variations de l'indice des matières ferreuses. Les prix des déchets du fer et de l'acier ont progressé de 2,5% en janvier et de presque 40% comparativement au niveau d'il y a un an.

These indexes are preliminary.
Ces indices sont provisoires.
The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
L'agrégation des indices par produits ou par industries devrait résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'Indice total – Tous les produits devra être considéré comme celui qui fait autorité, et l'Indice total – Toutes les industries manufacturières sera posé égal. posé égal.

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 9 to 28) mm indicates the M-level commodity code (from 14 to 43, 45 to 69) nn indicates either a split of the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates special details. pppp indicates the PCG code (except for some special aggregations which include several PCGs).

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample. S indicates an abbreviated sample. P indicates an indirect estimate.

rr indicates a split of a PCG. The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E+S) is given, occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order Industrial Product Price Indexes 1981 = 100, Concepts and Methods (Catalogue 62-5556).

(Catalogue 62-556).
En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de CANSIM (D nnnnn), un numero d'identification numérique, une mesure du degre de couverture et une mesure de la variabilité. Le numéro d'identification numérique prend la forme generale ss-mm-nn-pppp-rr où: ss indique le code du niveau S des produits (de 9 à 28) mm indique le code du niveau M des produits (de 14 à 43, 45 à 69) nn indique soit une composante du niveau M des produits, ou prend la valeur de 91 pour les agrégats spéciaux, ou de 99 pour les indices particuliers. pppp indique le code GPP (sauf pour certains agrégats spéciaux qui comprennent plusieurs GPP) rr indique une composante d'un GPP.
La mesure du degré de couverture pour les indices élémentaires est présentée à l'aide d'un symbole: E indique un échantillonnage exhaustif, S indique un échantillonnage direct (E + S). Ces mesures du degré de couverture par échantillonnage direct (E + S). Ces mesures du degré de couverture sont parlois arrondies au 5% le plus près afin d'assurer la confidentialité. La mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices les plus stables sont cotés A, les moins stables, D. Pour plus de renseignements, commandez le document de réference: Indices des prix des produits industriels 1981 = 100, concepts et méthodes (nº 62-556 au catalogue).

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois large plus récents sont sujets à révision.

The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(1) L'agregation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - tous les industries manufacturières sera

⁽²⁾

l'arrondissement, l'Indice total - tous les produits devie et e considéré controllés de la fin du tableau posé égal.

The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité. (2)

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industrial Product Price Indexes, 1986 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1986 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about four weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES INDICES DES PRIX INDUSTRIELS

Indices des prix des produits industriels, 1986 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1986. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indices des prix de l'industrie*, paraît quatre semaines environ après le communiqué dans le *Quotidien*. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabiliste, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1986. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1986 Input/Output table which, in turn, is derived from 1986 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where wⁱ are the values of the output of each commodity:

sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1986. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1986, laquelle à son tour est établie à partir des valeurs de 1986 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle wⁱ sont les valeurs de la production de chaque produit:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| (agg) P _{t/o} | denotes the composite price index movement between the base period o and time t for the defined aggregate; | (agg) P _{t/o} | dénote le mouvement de l'indice composite de prix entre la période de référence o et la période t pour l'agrégat défini; |
|---------------------------|--|---------------------------|--|
| wi | is the transaction value of the element i in the base period; | wi | est la valeur de transaction de l'élément i au cours de la période de référence; |
| P _{t/o} | is the price index for element i, meaning its price change from the base period to time t; | P _{t/o} | est l'indice de prix de l'élément i, désignant sa variation de prix entre la période de référence et la période t; |
| \sum_{i} | indicates summation over all elements i in the defined aggregate. | Σ_{i} | signifie la sommation de tous les éléments i dans l'agrégat défini. |

Historical Data

Historical series on the 1986 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1986-based Industrial Product Price Indexes (IPPI) series and the corresponding 1981-based Industrial Product Price Indexes (IPPI) series, using the year 1986 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both set of IPPI series are available to the public.

Reference Documents

62-558 Industry Price Indexes, 1986 = 100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures.

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

Données historiques

Les séries historiques sur la base 1986 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1986 et des séries correspondantes des indices des prix des produits industriels (IPPI) basées sur 1981, l'année 1986 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les deux ensembles de séries IPPI sont disponibles au public.

Documents de référence

62-558 Indices des prix de l'industrie, 1986 = 100: Guide aux utilisateurs, 40,00 \$.

Cette publication précise sommairement le contenu économique des séries dans un cadre général, de même qu'une brève description des différentes structures d'agrégation. Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats de produits. Y figurent également une description des caractéristiques des indices élémentaires. La publication contient des commentaires sur l'utilisation des indices.

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, 25,00 \$.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices.

La publication contient également un glossaire.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

RAW MATERIALS PRICE INDEXES (1986 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1986 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2009.

These indexes are a continuation of the previously published Raw Materials Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

INDICES DES PRIX DES MATIÈRES BRUTES (1986 = 100)

Les indices des prix des matières brutes (IPMB) mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1986, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 2009 de CANSIM.

Ces indices constituent la suite des Indices des prix des matières brutes, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990, et répétés dans le numéro de décembre de la présente publication.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes nettes payées et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1986 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes qouvernementaux.

Les pondérations furent dérivées des tableaux d'entréessorties de 1986, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$$P_{t/0}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/0}^{i}$$

| (agg) | | (agg) | |
|------------------|--|------------------|---|
| Pt/o | denotes the composite price index movement between the base period o and time t for the defined aggregate; | Pt/o | dénote le mouvement de l'indice composite de prix entre la période de référence o et la période courante t pour l'agrégat spécifié; |
| wi | is the transaction value of the element i in 1986; | wi | est la valeur de transaction de l'élément i en 1986; |
| P _{t/o} | is the price index for element i, meaning its price change from the base period o to time t; | P _{t/o} | est l'indice de prix de l'élément i, c'est-à-dire son changement de prix de la période de référence o à la période courante t; |
| \sum_{i} | indicates summation over all elements i in the defined aggregate. | Σ_{i} | indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié. |

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Reference Document

See reference document in IPPI. Document contains the weighting pattern of the Raw Materials Price Indexes.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

À l'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché pour une année récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

Document de référence

Voir le document de référence de l'IPPI, qui contient le schéma de pondération des indices de prix des matières brutes.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1986 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1986 as a time reference base and the weights used are 1986 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1986 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 2020. Indexes for the current year and the previous year are subject to revision.

These indexes are a continuation of the previously published Electricity Selling Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1986 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril. d'août et de décembre. Les indices ont comme période de référence 1986, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1986, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1986 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 2020. Les indices de la présente année et de l'année précédente sont sujets à révision.

Ces indices constituent la suite des indices des prix de vente de l'énergie électrique, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990 et répétés dans le numéro de décembre de la présente publication.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

Canada challenges the imagination. Imagine a country where Newfoundlanders live closer to Africans than they do to fellow Canadians in British Columbia. Or a country with an island that has a glacier bigger than Ireland. Imagine a country with two million lakes, and the world's longest coastline – but that shares a border with only one nation.

Statistics Canada has created the 54th edition of Canada: A Portrait as a celebration of our great

nation. Drawn from Statistics Canada's rich palette of national data; it paints a picture of where we are socially, economically, culturally and politically.

Over 60 unique and beautiful photographs combined with lively text, provide a close-up look at the Canada of today.

Experience this land's remarkable natural regions and diverse human landscape through six chapters entitled: This Land,
The People, The Society,
Arts and Leisure,
The Economy, and
Canada in the World.

Eminent Canadians such as astronaut Roberta Bondar, former hockey star Jean Béliveau, and writer W.O. Mitchell have contributed their personal visions of Canada

Canada: A Portrait is a beautiful illustration of the Canada of today.

Presented in a 30 cm X 23 cm (12 1/4" X 9") format, prestige hardcover, with over 200 pages, *Canada: A Portrait* (Catalogue No. 11-403E) is available in Canada for \$38.00 plus GST, US \$41.95 in the United States, and US \$48.95 in other countries.

To order write Statistics Canada, Publications Sales, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication. For faster ordering call toll-free 1-800-267-6677 and use your VISA and MasterCard or fax your order to (613) 951-1584.

Le Canada est un pays qui défie l'imagination. Imaginez un pays où les Terre-Neuviens vivent plus près des Africains que de leurs compatriotes de la Colombie-Britannique. Un pays où se trouve une île sur laquelle s'étend un glacier plus grand que l'Irlande. Imaginez un pays qui compte 2 millions de lacs et le plus long littoral du monde, et pourtant un seul voisin.

Statistique Canada a créé la 54^e édition d'**Un** portrait du Canada pour célébrer la grandeur de

> notre pays. C'est à partir du riche éventail de données nationales de Statistique

Canada que l'on a brossé ce tableau de notre situation sociale, économique, culturelle et politique.

Plus de 60 magnifiques photos, mariées à un texte vivant, offrent une vision claire et détaillée de ce qu'est le Canada d'aujourd'hui.

Découvrez les splendides régions naturelles de ce pays, de même que son paysage humain des plus diversifiés, à travers six chapitres intitulés :

Le territoire, La population, La société, Les arts et les loisirs, L'économie et Le Canada dans le monde.

D'éminents Canadiens, tels Roberta Bondar, astronaute, Jean Béliveau, ancienne vedette de hockey, et W.O. Mitchell, écrivain, y font part de leur vision personnelle du Canada.

Un portrait du Canada... un magnifique ouvrage de collection qui décrit admirablement bien le Canada d'aujourd'hui.

Présenté dans un format de 30 cm sur 23 cm (12,25 po X 9 po), dans une couverture rigide de luxe et en plus de 200 pages, *Un portrait du Canada* (N° 11-403F au catalogue) coûte 38 \$ plus TPS au Canada, 41,95 \$ US aux Etats-Unis et 48,95 \$ US dans les autres pays.

Pour commander, écrivez à **Statistique Canada, Vente** des publications, **Ottawa (Ontario), K1A 0T6** ou communiquez avec le Centre régional de consultation de Statistique Canada le plus proche. La liste figure dans la publication. Pour commander plus rapidement, composez sans frais le **1-800-267-6677** et utilisez votre carte VISA ou MasterCard ou télécopiez votre commande au **(613) 951-1584**.

ANADA'S INVIRONMENT L'ENVIRONDEMENT DU CANADA

very day you read news items about recycling, water pollution, istrial emissions or the depletion of ozone layer. Unfortunately, these orts are often fragmented, making it cult to get a complete picture of ada's physical environment.

nan Activity and the Environment is ten to help you understand the links veen our population, socio-economic vities and our environment. You'll for example, how the purple estrife and zebra mussels are ading throughout inland waters the effect they have.

CASE STUDY: A statistical profile of an

Ontario river basin is also included as

a case study to demonstrate how

socio-economic information can be

linked with physical data at a local level.

ous lisez tous les jours des articles traitant de recyclage, de la pollution de l'eau, des émissions de gaz industrielles ou de la diminution de la couche d'ozone. Malheureusement, ces rapports sont trop souvent fragmentés et il devient difficile de se faire une parfaite idée de l'environnement physique du Canada.

Activité humaine et l'environnement est écrit afin de vous aider à comprendre les liens entre notre population, nos activités socio-économiques et notre environnement. Vous verrez, par exemple, comment les salicaires et les dreissna sont réparties à travers les eaux intérieures et quels en sont leurs effets.

ÉTUDE DE CAS : un profil statistique du bassin

hydrographique de l'Ontario est également présenté,

comme étude de cas, en vue de montrer comment

l'information socio-économique peut être mise en rapport

avec les données physiques à un endroit donné.

mized in three, easy-to-read sections: Population, Sociolomic Systems, and Environmental Conditions, this publication aines our activities from a number of perspectives:

source consumption iste-generation

onitoring the conditions of land, water, air and ing organisms

unique bestseller highlights such fascinating details as: rchases of potential pollutants by Canadian households importance of natural resources to the Canadian economy ergy consumption by industry

your copy today!
n Activity and the Environment,
logue No. 11-509E) \$35 in
la, US \$42 in the United States
\$ \$49 in other countries.

to: Cation Sales, Statistics Canada /a, Ontario FT6 If more convenient, FAX your order to: (613) 951-1584, or contact your local Statistics Canada Reference Centre listed in this publication.

For faster ordering call 1-800-267-6677 and use VISA or MasterCard.

L'ouvrage est divisé en trois parties importantes : la population, les réseaux socio-économiques et l'état de l'environnement, qui examine nos activités sous différents angles:

- la consommation des ressources naturelles
- la production des déchets
- la surveillance de l'état des terres, de l'eau, de l'air et des organismes vivants

Ce best-seller unique met en relief des détails aussi fascinants que :

- les achats de polluants potentiels par les grandes maisons canadiennes
- l'importance des ressources naturelles pour l'économie canadienne
- la consommation d'énergie par industrie

Commandez votre exemplaire aujourd'hui! Activité humaine et l'environnement. (n° de catalogue 11-509F) 35 \$ au Canada, 42 \$ (US) aux États-Unis et 49 \$ (US) dans les autres pays.

Écrivez à : Vente des publications Statistique Canada Ottawa (Ontario) K1A 0T6 Si vous le préférez, télécopiez votre commande au (613) 951-1584, ou contactez votre centre de consultation régional de Statistique Canada, dont vous pouvez consulter la liste dans la présente publication.

YEAR BOOK

Your indispensable and comprehensive reference source on Canada

For essential information on Canada, turn to the Canada Year Book. An invaluable resource, the 1994 edition is beautifully designed in an inviting and easy-to-read format.

The 1994 Canada Year Book examines recent events, changes and trends in great detail. Organized carefully into 22 chapters, it answers questions on virtually every topic from geography through health to banking.

This edition features:

- Over 700 crisply written pages packed with eye-opening information on life in Canada from social, economic, cultural and demographic perspectives
- 250 concise tables plus 63 charts and graphs that put statistical information into focus
- Stunning photographs capturing distinctively Canadian scenes by some of this country's finest photographers
- Fascinating short feature articles covering everything from archaeology to white collar trends

Trusted for over 125 years by students, teachers, researchers, librarians and business people, the *Canada Year Book* is the reference source to consult <u>first</u> on all aspects of Canada.

An enduring addition to any home or office library!

ORDER YOUR COPY OF CANADA YEAR BOOK TODAY.

Available in separate English and French editions, the 1994 Canada Year Book (Catalogue No. 11-402E) is \$59.95 plus \$5.05 shipping and handling in Canada, US \$72 in the United States, and US \$84 in other countries.

To order, write to: Statistics Canada, Marketing Division, Sales and Service, Ottawa, Ontario K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

L'ANNUAIRE DU CANADA 1994

Un ouvrage complet et indispensable sur le Canada

Pour obtenir des renseignements essentiels sur le Canada, consultez l'Annuaire du Canada. Inestimable source d'information, l'édition de 1994 est un ouvrage d'une présentation très soignée, attrayant et facile à lire.

L'Annuaire du Canada 1994 étudie en profondeur les événements, les tendances et les changements récents. Divisé en 22 chapitres, il répond à vos questions sur presque tous les sujets, depuis la géographie jusqu'à la santé et la banque.

Voici ce que vous trouverez dans l'édition de 1994 :

- Plus de 700 pages écrites dans un style vif et pleines de renseignements intéressants sur les dimensions sociales, économiques, culturelles et démographiques de la vie canadienne
- 250 tableaux concis et 63 graphiques et diagrammes qui permettent de mettre en perspective l'information statistique
- Remarquables photographies de paysages typiquement canadiens par certains des photographes canadiens les plus illustres
- Courts articles fascinants sur des sujets divers, depuis l'archéologie jusqu'à l'évolution de la situation des cols blanc

Ouvrage de référence de prédilection des étudiants, des enseignants des chercheurs, des bibliothécaires et des gens d'affaires, et ce depuis plus de 125 ans, l'*Annuaire du Canada* est celui qu'il faut consulter en premier pour en savoir plus long sur tous les aspects du Canada.

Un volume que vous voudrez conserver longtemps dans votre bibliothèque ou au bureau!

COMMANDEZ DÈS AUJOURD'HUI VOTRE EXEMPLAIRE D L'ANNUAIRE DU CANADA

Vous pouvez vous procurer la version française ou anglaise de l'*Annuaire du Canada* 1994 (no 11-402F au catalogue) au coût de 59,95 \$ (supplément de 5,05 \$ pour les frais d'expédition et de manutention) au Canada, 72 \$ US aux États-Unis et 84 \$ US dans les autres pays.

Pour commander, écrivez à Statistique Canada, Division du marketing, Vente et service, Ottawa (Ontario) K1A 0T6, ou communiquez avec le centre de consultation de Statistique Canada le plus près (voir la liste qui figure dans la présente publication).

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on CD, diskette, computer print-out, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct on-line access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and the listed documents should be directed to:

Goods and Services Producing Industries Section, Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9607) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou tous les documents énumérés doivent être adressées à:

Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises et les administrations canadiennes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

Registered Trade Mark of Statistics Canada.

Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- ^r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisées et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissent pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division du marketing, Statistique Canada, Ottawa, K1A 0T6 ou téléphonez à (613) 951-8200.

Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" – "Permanence of Paper for Printed Library Materials", ANSI Z39.48 – 1984.

This publication was prepared under the direction of:

- Louis Marc Ducharme, Assistant Director, Prices Division

Highlights

Industrial Product Price Index

Preliminary data indicate that the Industrial Product Price Index (IPPI, 1986=100) showed a return to December's year-over-year change, 3.2%, from January's 2.5% change. The index rose by 0.9% in February, climbing to 115.7 from January's revised level of 114.7.

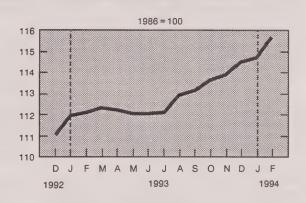

Faits saillants

Indice des prix des produits industriels

Selon les données provisoires, le taux de variation d'une année à l'autre de l'indice des prix des produits industriels (IPPI, 1986 = 100) est revenu à son niveau de décembre de 3,2%, comparativement à 2,5% en janvier. L'indice a augmenté de 0,9% en février, passant à 115,7 par rapport à son niveau révisé de 114,7 en janvier.

Chart 1 / Graphique 1

Industrial product price index Indice des prix des produits industriels

None of the indexes for the 21 major groups of products declined, although three remained unchanged. The most significant price increases in order of their contribution were: autos, trucks and other transport equipment (+1.6%), primary metal products (+2.5%), paper and paper products (+1.4%) and meat, fish and dairy products (+1.4%).

Between mid-January and mid-February, the value of the U.S. dollar rose 2.6% against the Canadian dollar, increasing the value of export prices quoted in U.S. dollars. This particularly affected the indexes for automobiles, trucks and other transport equipment; paper and paper products; and, to a lesser extent, lumber, sawmill and other wood products. In February 1994, the U.S. dollar was 8.0% higher against the Canadian dollar than in February 1993.

The increase in the year-over-year change in the overall IPPI was the result of increases in first-stage intermediate goods, in foods and feeds, in capital equipment, and in other finished goods. The only category where there was a decline in the year-over-year change in prices was second-stage intermediate goods.

Aucun des indices pour les 21 principaux groupes de produits n'a diminué, mais trois sont restés inchangés. Les augmentations de prix les plus appréciables, par ordre de contribution, sont les suivantes: voitures, camions et autre matériel de transport (+1,6%), produits métalliques primaires (+2,5%), papier et produits connexes (+1,4%), et viande, poisson et produits laitiers (+1,4%).

De la mi-janvier à la mi-février, la valeur du dollar américain a augmenté de 2,6% par rapport au dollar canadien et a accru ainsi les prix à l'exportation exprimés en dollars américains. Cette appréciation a touché en particulier les indices des voitures, camions et autre matériel de transport, du papier et des produits connexes et, dans une moindre mesure, les sciages, produits de scierie et divers. Entre février 1993 et février 1994, le dollar américain s'est apprécié de 8,0% par rapport au dollar canadien.

L'augmentation d'une année à l'autre de l'IPPI s'explique par les progressions notées pour les produits semi-finis de première étape, les aliments de consommation et aliments pour animaux, le matériel capitalisé et les autres produits finis. La seule catégorie qui a enregistré une diminution de la variation d'une année à l'autre des prix est celle des produits semi-finis de deuxième étape.

The price index for first-stage intermediate goods continued to increase in February, rising by 2.1%. This was the largest month-to-month increase since February 1992. Price increases for non-ferrous metals and wood pulp were the most important contributors to the increase.

The index for first-stage intermediate goods was 4.0% higher in February than a year previously, the largest twelve-month increase since 1989. Price levels have been rising strongly in the last three months, as they did in early 1992. However, the February level was about the same as in mid-1991.

In February 1994, the price index for second-stage intermediate goods rose by 0.6%, after remaining unchanged in January. The year-over-year change in second-stage intermediate goods, however, continued to decline, falling from 3.6% to 3.1%.

In February 1994, prices for finished goods rose 0.9%, the largest such increase since October 1992. Prices for foods and feeds rose by 0.7% compared to 0.9% for capital equipment and other finished goods.

For finished goods, the year-over-year change in prices rose to 3.0%, the same as last October. The year-over-year change in all three major finished goods categories increased in February.

The automobiles, trucks, and other transport equipment price index rose by 1.6% in February. The increase was primarily attributable to the decline in the value of the Canadian dollar as the export automobile index rose by 2.7% compared to an increase of 0.3% in domestic automobile prices.

Since December, domestic automobile prices have risen by 1.0%, after an increase of 1.8% recorded in October, the month when new models were introduced. Since October, the number of new cars sold has been rising steadily on a seasonally adjusted basis.

The primary metal products price index rose 2.5% in February, following smaller increases in December and January. This increase was primarily due to price increases for aluminum products (+7.9%), copper and copper alloy products (+3.3%), and nickel products (+10.8%). The continued increases in the prices for aluminum and nickel products have been generally attributed to current and pending cutbacks by world producers of these metals.

In February, the paper and paper products index rose 1.4% as both domestic and export sulphate woodpulp prices rose by 5.3%, and prices for newsprint and other paper for printing rose by 1.5%.

The 1.4% increase in the meat, fish, and dairy products price index was principally the result of price increases of about 8% in pork products.

L'indice des prix des produits semi-finis de première étape a continué de croître en février et a augmenté de 2,1%. C'est la plus forte hausse d'un mois à l'autre depuis février 1992. La principale cause a été la progression des prix des produits métalliques non ferreux et de la pâte de bois.

L'indice des prix des produits semi-finis de première étape a dépassé de 4,0% son niveau de février 1993, ce qui a marqué la plus forte augmentation sur douze mois depuis 1989. Le niveau des prix a fortement augmenté au cours des trois derniers mois, tout comme au début de 1992. Toutefois, le niveau de février est à peu près le même qu'au milieu de 1991.

En février 1994, l'indice des prix des produits semi-finis de deuxième étape a augmenté de 0,6%. Il était resté inchangé en janvier. Par contre, le taux de variation d'une année à l'autre de cet indice a continué de diminuer, passant de 3,6% à 3,1%.

En février 1994, les prix des produits finis ont augmenté de 0,9%, ce qui a marqué la hausse la plus forte depuis octobre 1992. Les prix des aliments de consommation et des aliments pour animaux se sont accrus de 0,7%, comparativement à des hausses de 0,9% pour le matériel capitalisé et les autres produits finis.

Dans le cas des produits finis, la variation des prix d'une année à l'autre a augmenté pour atteindre 3,0%, soit le même niveau qu'en octobre 1993. La variation d'une année à l'autre des trois principales catégories de produits finis s'est accrue en février.

L'indice des prix des voitures, camions et autre matériel de transport a progressé de 1,6% en février. Cette hausse s'explique principalement par la dépréciation du dollar canadien, puisque l'indice des automobiles à l'exportation s'est accru de 2,7%, alors que la croissance de celui des voitures domestiques a été de 0,3%.

Depuis décembre, les prix des voitures domestiques se sont accrus de 1,0%, après une augmentation de 1,8% en octobre, qui est le mois de la mise en marché des nouveaux modèles. Depuis octobre, le volume de ventes des voitures neuves a augmenté de façon soutenue (après désaisonnalisation).

L'indice des prix des produits métalliques primaires a augmenté de 2,5% en février, après des hausses moins fortes en décembre et en janvier. La progression résulte principalement de la majoration des prix des produits de l'aluminium (+7,9%), du cuivre et d'alliage de cuivre (+3,3%), et du nickel (+10,8%). On explique en général la progression continue du prix des produits d'aluminium et de nickel par un ralentissement actuel et éventuel de la production mondiale de ces métaux.

En février, l'indice du papier et des produits connexes s'est accru de 1,4%. En effet, les prix de la pâte de bois au sulfate domestique et d'exportation ont augmenté de 5,3%, et celui du papier journal et autres papiers d'impression, de 1,5%.

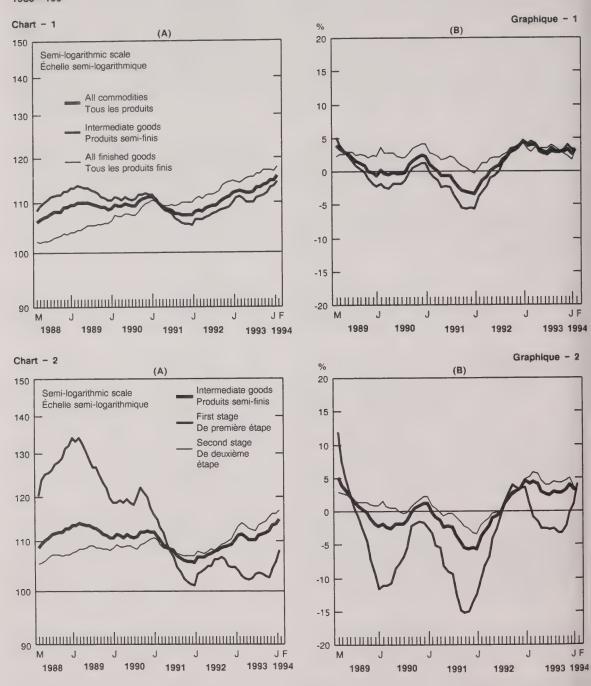

L'indice des prix de la viande, du poisson et des produits laitiers a progressé de 1,4%, principalement en raison d'une majoration d'environ 8% du prix des produits de porc.

Highlights

Raw Materials Price Index

Based on preliminary data, the Raw Materials Price Index (RMPI, 1986 = 100) was 111.2 in February 1994, up 0.8% from the previous month, as indexes rose for all components except mineral fuels. The most important contributors were animals and animal products (+2.1%), non-ferrous metals (+3.8%), wood (+1.1%), and vegetable products (+1.7%). The decline in the mineral fuels index (-2.9%) offset most of these increases. Consequently, the RMPI excluding the mineral fuels component was up 2% in February.

In February 1994, the RMPI was 1.1% higher than February 1993. This increase was mainly due to higher prices for wood (+20.8%), vegetable products (+16.9%), ferrous materials (+19.7%), non-ferrous metals (+5.2%) and animals and animal products (+2.2%). Almost offsetting these increases was the decline in the mineral fuels index (-20.6%). Excluding the mineral fuels component, the RMPI was up 10.3% in February 1994 compared to February 1993.

The mineral fuels index fell in February by 2.9% as crude oil prices declined 3.4%. The price of natural gas increased by 4.3%. The mineral fuels index was down 20.6% from February 1993, due primarily to a 22.8% drop in the prices for crude oil, offset slightly by higher prices for natural gas (+14.7%).

The animals and animal products index rose 2.1% in February, reflecting higher prices for hogs (+9.9%), and furs, hides and skins (+17.5%). Compared to a year earlier, the prices for animals and animal products were up 2.2%. The main contributors came from higher prices for hogs (+19.5%), and furs, hides and skins (+20.3%), largely offset by lower prices for cattle-for-slaughter (-5.3%) and fish (-4.4%).

In February, the non-ferrous metals index increased 3.8%, led by higher prices for aluminum materials (+13.5%), copper concentrates (+4.2%), and nickel concentrates (+9.4%). On a year-to-year basis, the non-ferrous metals index was 5.2% higher. However, since November 1993, the index was up by 13.0%, as all metal prices rose, led by copper concentrates (+19.0%), aluminum materials (+25.7%) and nickel concentrates (+25.4%). The February 1994 index for aluminum materials (107.5) was its highest level since December 1990.

Wood prices were up 1.1% in February, mainly because of higher prices for logs and bolts (+1.5%). Lower pulpwood prices (-0.3%) somewhat offset the overall increase. Compared to February 1993, wood

Faits saillants

Indice des prix des matières brutes

D'après les chiffres préliminaires, l'indice des prix des matières brutes (IPMB, 1986 = 100) s'est fixé à 111,2 en février 1994, soit une hausse de 0,8% par rapport au mois précédent. Toutes les composantes ont progressé, à l'exclusion des combustibles minéraux. Les gains sont principalement attribuables aux animaux et substances animales (+2,1%), aux métaux non ferreux (+3,8%), au bois (+1,1%) et aux substances végétales (+1,7%); cependant, ils ont été atténués par une chute de 2,9% des combustibles minéraux. Ainsi, l'IPMB, à l'exclusion de cette dernière composante, a progressé de 2% en février.

En février 1994, l'IPMB s'est fixé à 1,1% de plus qu'en février 1993, en raison surtout de la hausse des prix du bois (+20,8%), des substances végétales (+16,9%), des matières ferreuses (+19,7%), des métaux non ferreux (+5,2%) et des animaux et substances animales (+2,2%). Ces gains ont été légèrement atténués par une baisse de l'indice des combustibles minéraux (-20,6%). En excluant cette composante, l'IPMB a progressé de 10,3% en février 1994 par rapport à février 1993.

L'indice des combustibles minéraux a diminué de 2,9% en février, le prix du pétrole brut ayant diminué de 3,4%. Le prix du gaz naturel a augmenté de 4,3%. L'indice des combustibles minéraux a chuté de 20,6% par rapport à février 1993, en raison surtout du recul de 22,8% du prix du pétrole brut qui a été légèrement atténué par la hausse des prix du gaz naturel (+14,7%).

L'indice des animaux et substances animales a augmenté de 2,1% en février, en raison d'une hausse des prix du porc (+9,9%), et des fourrures, cuir et peaux (+17,5%). Par rapport à l'année précédente, les prix des animaux et des substances animales ont progressé de 2,2%, gains principalement attribuables à la hausse des prix des porcs (+19,5%), et des fourrures, cuir et peaux (+20,3%). Ceux-ci ont été largement atténués par une chute des prix des bovins envoyés à l'abattage (-5,3%) et du poisson (-4,4%).

En février, l'indice des métaux non ferreux a augmenté de 3,8% en raison d'une augmentation des prix des produits à base d'aluminium (+13,5%), des concentrés de cuivre (+4,2%) et des concentrés de nickel (+9,4%). D'une année à l'autre, l'indice des métaux non ferreux a progressé de 5,2%. Cependant, depuis novembre 1993, l'indice s'est accru de 13,0%, les prix des métaux ayant augmenté, notamment ceux des concentrés de cuivre (+19,0%), des produits à base d'aluminium (+25,7%), et des concentrés de nickel (25,4%). L'indice des produits à base d'aluminium pour février 1994 (107,5) a été à son niveau le plus élevé depuis décembre 1990.

Les prix du bois ont progressé de 1,1% en février, en raison surtout de la hausse des prix des billes et billots (+1,5%). La baisse des prix du bois à pâte (-0,3%) a quelque peu atténué la croissance globale. Par rapport à février 1993, les prix du

prices were 20.8% higher, primarily due to price increases for logs and bolts (+25.9%) and pulpwood (+4.9%). The increase in the wood index occurred between February and July 1993. Since then, its level has fluctuated a little below its July peak of 195.4.

The vegetable products index increased 1.7% in February. This marked the fifth consecutive month when vegetable prices have increased. Higher February prices, making a major contribution to the index, were unrefined sugar (+10.5%) and wheat (+2.8%). Compared to February 1993, the vegetable products index was up 16.9%, reflecting higher prices for wheat (+38.4%), unrefined sugar (+34.7%), canola (+25.9%), corn (+26.8%), and soybeans (+26.4%).

In February, ferrous material prices rose by 1.4%, principally due to higher iron ore prices (+2%). Ferrous material prices have increased 19.7% over the last twelve months. This was largely due to higher prices for iron and steel scrap (+32.2%) and iron ore (+8.4%).

bois se sont accrus de 20,8%, ce qui est en grande partie attribuable à l'augmentation des prix des billes et billots (+25,9%) et du bois à pâte (+4,9%). La croissance de l'indice du bois s'est produite entre février et juillet 1993. Depuis, le niveau a varié légèrement au-dessous du sommet de 195,4 enregistré en juillet.

Pour le cinquième mois consécutif, l'indice des substances végétales a progressé de 1,7% en février. Ce gain est principalement attribuable à la hausse des prix du sucre non raffiné (+10,5%) et du blé (+2,8%). Par rapport à février 1993, l'indice des substances végétales s'est accru de 16,9%, reflétant ainsi l'augmentation des prix du blé (+38,4%), du sucre non raffiné (+34,7%), du canola (+25,9%), du maïs (+26,8%), et du soja (+26,4%).

En février, l'indice des prix des matières ferreuses a augmenté de 1,4%, surtout en raison de la hausse des prix du minerai de fer (+2%). Les prix des matières ferreuses ont progressé de 19,7% au cours des douze derniers mois, ce qui est surtout attribuable aux gains au titre des prix des déchets de fer et d'acier (+32,2%) et du minerai de fer (+8,4%).

Note: Indexes for the most recent six months shown are subject to revision

Indexes for the most recent six months shown are subject to revision.

Les indices figurant pour les six mois les plus récents sont sujets à révision.

The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 9 to 40, 40, 45 to 69)

mm indicates the M-level commodity code (from 14 to 43, 45 to 69)

mm indicates the PCG code (except for some special aggregations which include several PCGs).

rr Indicates a spill of a PCG.

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E+S) is given, occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. Por further information order industrial Product Price Indexes 1981 = 100, Concepts and Methods (Catalogue 62-555).

En issant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de CANSIM (D nnnnnn), un numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique prend la forme générale ss-mm-nn-pppp-rr où:

s si notation de code d'un viewa S des produits (se 9 à 28)

mm indique le code d'un viewa S des produits,

rr indique une composante d'un GPP.
La mesure du degré de couverture pour les indices élémentaires est présentée à l'aide d'un symbole: E indique un échantillonnage exhaustif, S indique un échantillonage sommaire et P indique une estimation indirecte. Pour les indices composites, la donnée en pourcentage représente une estimation du degré de couverture par échantillonnage direct (E+S). Ces mesures du degré de couverture sont parfois arrondies au 5% le plus prés afin d'assurer la confidentialité. La mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices les plus stables sont cotés A, les moins stables, D. Pour plus de renseignements, commandez le document de reférence: Indices des prix des produits industriels 1981 = 100, concepts et méthodes (nº 62-556 au catalogue).

TABLEAU 3. Indices des prix des produits industriels, par industries et groupes d'industries(1)

Indexes for the most recent six months shown are subject to revision.
Les indices figurant pour les six mois les plus récents sont sujets à révision.
The aggregation of indexes by commodifies or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All
Commodifies Index shall be regarded as authoritative, and the All Manufacturing industries is adjusted to match.
L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera Nota:

(1) (2)

l'arrondissement, l'indice total - tous les produits devra être considere comme celui qui fait autorité, et l'indice total - toutes les industries individuctioneres sere posé égal.

The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité. (2)

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industrial Product Price Indexes, 1986 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1986 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about four weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES INDICES DES PRIX INDUSTRIELS

Indices des prix des produits industriels, 1986 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1986. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indices des prix de l'industrie*, paraît quatre semaines environ après le communiqué dans le *Quotidien.* Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabiliste, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1986. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1986 Input/Output table which, in turn, is derived from 1986 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in production patterns.

Formula

1000)

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where wⁱ are the values of the output of each commodity:

indicates summation over all elements i in

sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1986. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1986, laquelle à son tour est établie à partir des valeurs de 1986 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle wⁱ sont les valeurs de la production de chaque produit:

$$P_{t/0}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/0}^{i}$$

| P _{t/o} | denotes the composite price index movement between the base period o and time t for the defined aggregate; | P _{t/o} | dénote le mouvement de l'indice composite de prix entre la période de référence o et la période t pour l'agrégat défini; |
|------------------|--|------------------|--|
| wi | is the transaction value of the element i in the base period; | Wİ | est la valeur de transaction de l'élément i au cours de la période de référence; |
| P _{t/o} | is the price index for element i, meaning its price change from the base period to time t; | P _{t/o} | est l'indice de prix de l'élément i, désignant sa variation de prix entre la période de référence et la période t; |
| | | _ | |

 \sum_{i}

l'agrégat défini.

(200)

the defined aggregate.

signifie la sommation de tous les éléments i dans

Historical Data

Historical series on the 1986 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity indexes (PCG) classification. The historical series were obtained by linking together movements from the 1986-based Industrial Product Price Indexes (IPPI) series and the corresponding 1981-based Industrial Product Price Indexes (IPPI) series, using the year 1986 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both set of IPPI series are available to the public.

Reference Documents

62-558 Industry Price Indexes, 1986 = 100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures.

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

Données historiques

Les séries historiques sur la base 1986 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1986 et des séries correspondantes des indices des prix des produits industriels (IPPI) basées sur 1986 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les deux ensembles de séries IPPI sont disponibles au public.

Documents de référence

62-558 Indices des prix de l'industrie, 1986 = 100: Guide aux utilisateurs, 40,00 \$.

Cette publication précise sommairement le contenu économique des séries dans un cadre général, de même qu'une brève description des différentes structures d'agrégation. Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats de produits. Y figurent également une description des caractéristiques des indices élémentaires. La publication contient des commentaires sur l'utilisation des indices.

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, 25,00 \$.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices.

La publication contient également un glossaire.

RAW MATERIALS PRICE INDEXES (1986 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1986 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2009.

These indexes are a continuation of the previously published Raw Materials Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

INDICES DES PRIX DES MATIÈRES BRUTES (1986 = 100)

Les indices des prix des matières brutes (IPMB) mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1986, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 2009 de CANSIM.

Ces indices constituent la suite des Indices des prix des matières brutes, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990, et répétés dans le numéro de décembre de la présente publication.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes nettes payées et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1986 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes quyernementaux.

Les pondérations furent dérivées des tableaux d'entréessorties de 1986, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| (agg) P _{t/o} | denotes the composite price index movement between the base period o and time t for the defined aggregate; | (agg) P _{t/o} | dénote le mouvement de l'indice composite de prix entre la période de référence o et la période courante t pour l'agrégat spécifié; |
|---------------------------|--|---------------------------|---|
| wi | is the transaction value of the element i in 1986; | wi | est la valeur de transaction de l'élément i en 1986; |
| P _{t/o} | is the price index for element i, meaning its price change from the base period o to time t; | P _{t/o} | est l'indice de prix de l'élément i, c'est-à-dire son changement de prix de la période de référence o à la période courante t; |
| $\Sigma_{_{\mathrm{i}}}$ | indicates summation over all elements i in the defined aggregate. | \sum_{i} | indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié. |

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Reference Document

See reference document in IPPI. Document contains the weighting pattern of the Raw Materials Price Indexes.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

À l'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché pour une année récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

Document de référence

Voir le document de référence de l'IPPI, qui contient le schéma de pondération des indices de prix des matières brutes.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1986 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1986 as a time reference base and the weights used are 1986 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1986 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 2020. Indexes for the current year and the previous year are subject to revision.

These indexes are a continuation of the previously published Electricity Selling Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1986 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril. d'août et de décembre. Les indices ont comme période de référence 1986, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1986, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1986 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 2020. Les indices de la présente année et de l'année précédente sont sujets à révision.

Ces indices constituent la suite des indices des prix de vente de l'énergie électrique, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990 et répétés dans le numéro de décembre de la présente publication.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

UN PORTRAIT

DU

CANADA

POUR CÉLÉBRER LA

GRANDEUR DE NOTRE PAYS

Canada challenges the imagination. Imagine a country where Newfoundlanders live closer to Africans than they do to fellow Canadians in British Columbia. Or a country with an island that has a glacier bigger than Ireland. Imagine a country with two million lakes, and the world's longest coastline – but that shares a border with only one nation.

Statistics Canada has created the 54th edition of Canada: A Portrait as a celebration of our great

nation. Drawn from Statistics Canada's rich palette of national data, it paints a picture of where we are socially, economically, culturally and politically.

Over 60 unique and beautiful photographs combined with lively text, provide a close-up look at the Canada of today.

Experience this land's remarkable natural regions and diverse human landscape through six chapters entitled: This Land,
The People, The Society,
Arts and Leisure,
The Economy, and

Canada in the World.

Eminent Canadians such as astronaut Roberta Bondar, former hockey star Jean Béliveau, and writer W.O. Mitchell have contributed their personal visions of Canada.

Canada: A Portrait is a beautiful illustration of the Canada of today.

Presented in a 30 cm X 23 cm (12 1/4" X 9") format, prestige hardcover, with over 200 pages, *Canada:*A *Portrait* (Catalogue No. 11-403E) is available in Canada for \$38.00 plus GST, US \$41.95 in the United States, and US \$48.95 in other countries.

To order write **Statistics Canada**, **Publications Sales**, **Ottawa**, **Ontario**, **K1A 076** or contact the nearest Statistics Canada Regional Reference Centre listed in this publication. For faster ordering call toll-free **1-800-267-6677** and use your VISA and MasterCard or fax your order to **(613) 951-1584**.

Le Canada est un pays qui défie l'imagination. Imaginez un pays où les Terre-Neuviens vivent plus près des Africains que de leurs compatriotes de la Colombie-Britannique. Un pays où se trouve une île sur laquelle s'étend un glacier plus grand que l'Irlande. Imaginez un pays qui compte 2 millions de lacs et le plus long littoral du monde, et pourtant un seul voisin.

Statistique Canada a créé la 54^e édition d'**Un**portrait du Canada pour célébrer la grandeur de

notre pays. C'est à partir du riche éventail de données nationales de Statistique

Canada que l'on a brossé ce tableau de notre situation sociale, économique, culturelle et politique.

Plus de 60 magnifiques photos, mariées à un texte vivant, offrent une vision claire et détaillée de ce qu'est le Canada d'aujourd'hui.

Découvrez les splendides régions naturelles de ce pays, de même que son paysage humain des plus diversifiés, à travers six chapitres intitulés :

Le territoire, La population, La société, Les arts et les loisirs, L'économie et Le Canada dans le monde.

D'éminents Canadiens, tels Roberta Bondar, astronaute, Jean Béliveau, ancienne vedette de hockey, et W.O. Mitchell, écrivain, y font part de leur vision personnelle du Canada.

Un portrait du Canada... un magnifique ouvrage de collection qui décrit admirablement bien le Canada d'aujourd'hui.

Présenté dans un format de 30 cm sur 23 cm (12,25 po X 9 po), dans une couverture rigide de luxe et en plus de 200 pages, *Un portrait du Canada* (N° 11-403F au catalogue) coûte 38 \$ plus TPS au Canada, 41,95 \$ US aux États-Unis et 48,95 \$ US dans les autres pays.

Pour commander, écrivez à **Statistique Canada, Vente** des publications, Ottawa (Ontario), K1A 0T6 ou communiquez avec le Centre régional de consultation de Statistique Canada le plus proche. La liste figure dans la publication. Pour commander plus rapidement, composez sans frais le 1-800-267-6677 et utilisez votre carte VISA ou MasterCard ou télécopiez votre commande au (613) 951-1584.

V

THE 1994 CANADA YEAR BOOK

Your indispensable and comprehensive reference source on Canada

For essential information on Canada, turn to the *Canada Year Book*. An invaluable resource, the 1994 edition is beautifully designed in an inviting and easy-to-read format.

The 1994 Canada Year Book examines recent events, changes and trends in great detail. Organized carefully into 22 chapters, it answers questions on virtually every topic from geography through health to banking.

This edition features:

- Over 700 crisply written pages packed with eye-opening information on life in Canada from social, economic, cultural and demographic perspectives
 - 250 concise tables plus 63 charts and graphs that put statistical information into focus
- Stunning photographs capturing distinctively Canadian scenes by some of this country's finest photographers
 - Fascinating short feature articles covering everything from archaeology to white collar trends

Trusted for over 125 years by students, teachers, researchers, librarians and business people, the *Canada Year Book* is <u>the</u> reference source to consult <u>first</u> on all aspects of Canada.

An enduring addition to any home or office library!

ORDER YOUR COPY OF CANADA YEAR BOOK TODAY.

Available in separate English and French editions, the 1994 *Canada Year Book* (Catalogue No. 11-402E) is \$59.95 plus \$5.05 shipping and handling in Canada, US \$72 in the United States, and US \$84 in other countries.

To order, write to: Statistics Canada, Marketing Division, Sales and Service, Ottawa, Ontario K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

If more convenient, fax your order to 1-613-951-1584 or call toll-free 1-800-267-6677 and charge it to your VISA or MasterCard.

L'ANNUAIRE DU CANADA 1994

Un ouvrage complet et indispensable sur le Canada

Pour obtenir des renseignements essentiels sur le Canada, consultez l'Annuaire du Canada. Inestimable source d'information, l'édition de 1994 est un ouvrage d'une présentation très soignée, attrayant et facile à lire.

L'Annuaire du Canada 1994 étudie en profondeur les événements, les tendances et les changements récents. Divisé en 22 chapitres, il répond à vos questions sur presque tous les sujets, depuis la géographie jusqu'à la santé et la banque.

Voici ce que vous trouverez dans l'édition de 1994 :

- Plus de 700 pages écrites dans un style vif et pleines de renseignements intéressants sur les dimensions sociales, économiques, culturelles et démographiques de la vie canadienne
- 250 tableaux concis et 63 graphiques et diagrammes qui permettent de mettre en perspective l'information statistique
- Remarquables photographies de paysages typiquement canadiens par certains des photographes canadiens les plus illustres
- Courts articles fascinants sur des sujets divers, depuis l'archéologie jusqu'à l'évolution de la situation des cols blancs

Ouvrage de référence de prédilection des étudiants, des enseignants, des chercheurs, des bibliothécaires et des gens d'affaires, et ce depuis plus de 125 ans, l'*Annuaire du Canada* est celui qu'il faut consulter en premier pour en savoir plus long sur tous les aspects du Canada.

Un volume que vous voudrez conserver longtemps dans votre bibliothèque ou au bureau!

COMMANDEZ DÈS AUJOURD'HUI VOTRE EXEMPLAIRE DE L'ANNUAIRE DU CANADA

Vous pouvez vous procurer la version française ou anglaise de l'*Annuaire du Canada* 1994 (no 11-402F au catalogue) au coût de 59,95 \$ (supplément de 5,05 \$ pour les frais d'expédition et de manutention) au Canada, 72 \$ US aux États-Unis et 84 \$ US dans les autres pays.

Pour commander, écrivez à Statistique Canada, Division du marketing, Vente et service, Ottawa (Ontario) K1A 0T6, ou communiquez avec le centre de consultation de Statistique Canada le plus près (voir la liste qui figure dans la présente publication).

Si vous le préférez, télécopiez votre commande en signalant le 1-613-951-1584 ou téléphonez sans frais au 1-800-267-6677 et portez les frais à votre compte VISA ou MasterCard.

re you getting your information on the Canadian economy "first-hand"?

Chances are, you spend hours reading several newspapers and a handful of magazines trying to get the whole economic picture - only to spend even more time weeding out fiction from fact! Wouldn't it be a great deal more convenient (and much more effective) to go straight to the source?

Join the thousands of successful Canadian decisionmakers who turn to Statistics Canada's Canadian Economic Observer for their monthly briefing. Loaded with first-hand information, collectively published nowhere else, CEO is a quick, concise and panoramic overview of the Canadian economy. Its reliability and completeness are without equal.

single source

Consultations with our many readers - financial analysts, planners, economists and business leaders - have contributed to CEO's present, widely acclaimed, two-part format. The Analysis Section includes thought-provoking commentary on current economic conditions, issues, trends and developments. The Statistical Summary contains the complete range of hard numbers on critical economic indicators: markets, prices, trade, demographics, unemployment and more.

More practical, straightforward and user-friendly than ever before, the Canadian Economic Observer gives you more than 150 pages of in-depth information in one indispensable source.

hy purchase CEO?

As a subscriber, you'll be directly connected to Statistics Canada's economic analysts. Names and phone numbers of the experts who can help solve your particular research problem or find specialized data are listed with articles and features.

You'll also receive a complimentary copy of CEO's annual Historical Statistical Supplement. Sixty years of historical perspectives right at your fingertips - at no additional cost

So why wait for others to publish Statistics Canada's data second-hand when you can have it straight from the source? Order your subscription to the Canadian Economic Observer today.

The Canadian Economic Observer (catalogue number 10-230) is \$220 annually in Canada, US\$260 in the United States and US\$310 in other countries.

To order, write: Statistics Canada Marketing Division Sales and Service Ottawa, Ontario, K1A 0T6

or contact the nearest Statistics Canada Reference Centre listed in this publication.

If more convenient, fax your order to 1-613-951-1584 or call toll-free 1-800-267-6677 and use your VISA or MasterCard

ecevez-vous directement vos informations sur l'économie canadienne?

Il est probable que vous passez des heures à lire plusieurs journaux et un paquet de revues pour essayer d'avoir une vue complète de la situation économique, et ensuite passer encore plus de temps à séparer le réel de ce qui ne l'est pas. Ne serait-il pas plus pratique (et beaucoup plus efficace) de remonter directement à la source?

Joignez-vous aux milliers de décideurs canadiens gagnants qui lisent L'Observateur économique canadien pour leur séance de rapport mensuelle. Rempli de renseignements disponibles nulle part ailleurs, l'OEC permet d'avoir une vue générale rapide et concise de l'économie canadienne. Il est inégalé par sa fiabilité et son exhaustivité.

ne seule source

Les consultations que nous avons eues avec nos nombreux lecteurs, des analystes financiers, des planificateurs, des économistes et des chefs d'entreprise, nous ont permis de présenter l'OEC dans son format actuel en deux parties, qui a été bien accueilli. La section de l'analyse contient des commentaires qui donnent à réfléchir sur la conjoncture économique, les problèmes, les tendances et les développements. L'aperçu statistique contient l'ensemble complet des chiffres réels pour les indicateurs économiques essentiels : les marchés, les prix, le commerce, la démographie, le chômage et bien d'autres encore.

Plus pratique, plus simple, plus facile à utiliser qu'auparavant, L'Observateur économique canadien vous offre plus de 150 pages de renseignements poussés sous une seule couverture.

ourquoi acheter l'OEC?

En tant qu'abonné à l'OEC, vous êtes directement relié aux analystes économiques de Statistique Canada. Le nom et le numéro de téléphone des experts qui peuvent vous aider à résoudre vos problèmes particuliers de recherche ou trouver des données spécialisées sont cités dans les articles et les rubriques de l'OEC

Vous recevrez également un exemplaire gratuit du Supplément statistique historique annuel. Vous aurez ainsi devant vous soixante années de données rétrospectives et ce, à titre gracieux.

Pourquoi devez-vous donc attendre que d'autres publient les données de Statistique Canada qu'ils ont reprises alors que vous pouvez les obtenir directement à la source? Abonnez-vous à L'Observateur économique canadien dès aujourd'hui.

Le prix de l'abonnement annuel à L'Observateur économique canadien (nº 10-230 au catalogue) est de 220 \$ au Canada, de 260 \$ US aux États-Unis et de 310 \$ US dans les autres pays.

Pour commander, écrivez à : Statistique Canada

Division du marketing Vente et service Ottawa (Ontario) K1A 0T6

ou adressez-vous au Centre de consultation de Statistique Canada le plus proche de chez vous et dont la liste figure dans cette publication.

Si vous le préférez, vous pouvez envoyer votre commande par télécopieur au 1-613-951-1584, ou téléphoner sans frais au 1-800-267-6677 et utiliser votre carte VISA ou MasterCard.

Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises et les administrations canadiennes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

Registered Trade Mark of Statistics Canada.

Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisées et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissent pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division du marketing, Statistique Canada, Ottawa, K1A 0T6 ou téléphonez à (613) 951-8200.

Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" – "Permanence of Paper for Printed Library Materials", ANSI Z39.48 – 1984.

Highlights

Industrial Product Price Index

According to preliminary figures, the year-over-year change in the Industrial Product Price Index (IPPI, 1986 = 100), continued to rise in March, jumping to 3.6% from February's revised figure of 3.3%. However, 3.6% is still below the year-over-year change observed in the first four months of 1993, when it ranged from 3.7% to 4.4%. The IPPI climbed to 116.3 from 115.8 as the month-to-month change in the index fell back to 0.4% compared to February's increase of 1.0%.

Faits saillants

Indice des prix des produits industriels

Selon les chiffres provisoires, la variation d'une année à l'autre de l'indice des prix des produits industriels (IPPI, 1986 = 100) a continué de progresser en mars, passant de 3,3% en février à 3,6%. Cependant,ce dernier taux demeure inférieur à la variation d'une année à l'autre observée au cours des quatre premiers mois de 1993; elle variait alors entre 3,7% et 4,4%. L'IPPI a augmenté pour passer de 115,8 à 116,3, la variation mensuelle de l'indice ayant tombé à 0,4% par rapport à la hausse de 1,0% enregistrée en février.

produits industriels

Industrial product price index

In March, price increases were broadly based as the price indexes for sixteen of the 21 major groups of products rose while 3 remained unchanged and 2 declined. The most significant price increases in order of their importance, were: primary metal products (+1.7%), autos, trucks and other transport equipment (+0.4%), and paper and paper products (+1.0%). The two indexes that edged downward were electric and communication products (-0.2%) and textile products (-0.1%).

Between mid-February and mid-March, the value of the U.S. dollar continued to rise against the Canadian dollar, increasing the value of export prices quoted in U.S. dollars by 0.7%. This particularly affected the indexes for automobiles, trucks and other transport equipment; paper and paper products; and, to a lesser extent, lumber, sawmill and other wood products. In March 1994, the U.S. dollar was 9.4% higher against the Canadian dollar than in March 1993.

En mars, les augmentations de prix ont été largement réparties, les indices de prix pour 16 des 21 grands groupes de produits ayant progressé; les indices de trois groupes sont demeurés inchangés, et deux ont chuté. Les hausses les plus importantes ont touché, par ordre d'importance, les produits métalliques primaires (+1,7%), les automobiles, les camions et d'autre matériel de transport (+0,4%) et le papier et les produits connexes (+1,0%). Les deux groupes dont l'indice a chuté sont les appareils électriques et de télécommunications (-0,2%) et les produits textiles (-0,1%).

De la mi-février à la mi-mars, la valeur du dollar américain a continué d'augmenter par rapport au dollar canadien, élevant ainsi de 0,7% la valeur des prix à l'exportation exprimés en dollars américains. Cela a influé particulièrement sur les indices des voitures, camions et matériel de transport, du papier et des produits connexes; et dans une moindre mesure, du bois d'oeuvre, des sciages et autres produits du bois. En mars 1994, le dollar américain était 9,4% supérieur au dollar canadien par rapport à mars 1993.

The increase in the year-over-year change in the IPPI was the result of increases in the year-over-year changes for first- stage intermediate goods, foods and feeds, capital equipment, and all other finished goods. The only category where there was a decline in the year-over-year change in prices was second-stage intermediate goods.

The price index for first-stage intermediate goods continued to increase in March, rising by 1.4% compared to 2.3% in February. Price increases for aluminum products, wood pulp, and copper and copper alloy products were the most important contributors to the increase.

The index for first-stage intermediate goods was 6.7% higher in March than a year earlier. This was the largest 12-month increase since April 1989. Price levels have been rising strongly in the last four months, as they did in early 1992. However, the March level was about the same as in May 1991.

In March, the price index for second-stage intermediate goods rose by only 0.3%, down from 0.7% in February. This saw the year-over-year change in second-stage intermediate goods continue to decline to 3.0%, from 3.3%.

In March, prices for finished goods rose 0.3%, compared to 0.9% in February. In all three categories of finished goods, smaller price increases occurred in March than in February. The price index for foods and feeds rose by 0.3% in March, down from 0.7% in February. The index for capital equipment rose by 0.3% compared to 0.9%, and the index for all other finished goods also rose by 0.3% compared to 1.0%. In both February and March, meat products dominated the increase for foods and feeds. Similarly, the price movements of motor vehicles dominated the increase for capital equipment in both months.

The year-over-year change in the finished goods price index, however, rose to 3.4% in March compared to 3.1% in February. The year-over-year change in all three major finished goods categories increased in March. The year-over-year changes for both the capital equipment index and all other finished goods index tended to increase from March 1993 to August 1993 only to decline again from September through to January. In this first quarter of 1994, however, the year-over-year changes in these two indexes have again increased.

La hausse de la variation d'une année à l'autre de l'IPPI était attribuable à une augmentation de la variation annuelle des indices des produits semi-finis de première étape, des aliments de consommation et des aliments pour animaux, du matériel capitalisé et tous les produits finis. La seule catégorie où on a observé une baisse de la variation d'une année à l'autre des prix est encore celle des produits semi-finis de deuxième étape.

L'indice des prix des produits semi-finis de première étape a continué d'augmenter en mars, cette fois de 1,4% par rapport à 2,3% en février. L'augmentation est en grande partie attribuable à celle des prix des produits de l'aluminium, de la pâte de bois et des produits du cuivre et des alliages de cuivre.

En mars, l'indice des prix des produits semi-finis de première étape était de 6,7% supérieur à celui enregistré un an plus tôt. Il s'agit de la plus forte hausse observée sur une période de douze mois depuis avril 1989. Les prix ont augmenté considérablement depuis quatre mois, comme ils l'ont fait au début de 1992. Toutefois, le niveau de mars équivaut environ à celui de mai 1991.

L'indice des prix des produits semi-finis de deuxième étape ne s'est accru que de 0,3% en mars, une baisse par rapport à 0,7% en février. La variation d'une année à l'autre de l'indice des produits semi-finis de deuxième étape a continué de diminuer, passant ainsi de 3,3% à 3,0%.

En mars, les prix des produits finis n'ont augmenté que de 0,3% par rapport à 0,9% en février. On a observé des hausses de prix moins élevées en mars qu'en février pour les trois catégories de produits finis. L'indice des prix des aliments de consommation et des aliments pour animaux a progressé de 0,3% en mars, un recul par rapport à 0,7% en février. L'indice des prix du matériel capitalisé s'est accru de 0,3% seulement par rapport à 0,9%. Celui de tous les autres produits finis a également progressé de 0,3% par rapport à 1,0%. En février et en mars, les produits de viandes ont affiché la plus forte hausse dans la catégorie des aliments de consommation et des aliments pour animaux. De même, au cours de ces deux mois, ce sont les mouvements des prix des véhicules automobiles qui ont le plus contribué à l'augmentation de l'indice du matériel capitalisé.

La variation d'une année à l'autre de l'indice des prix des produits finis a toutefois progressé pour passer de 3,1% en février à 3,4% en mars. La variation d'une année à l'autre dans les trois principales catégories de produits finis a augmenté en mars. En ce qui concerne l'indice du matériel capitalisé et celui de tous les produits finis, les variations d'une année à l'autre ont affiché une tendance à la hausse de mars à août 1993, et ont ensuite chuté à nouveau de septembre à janvier inclusivement. Au cours du premier trimestre de 1994, cependant, les variations d'une année à l'autre de ces deux indices ont affiché à nouveau un mouvement à la hausse

The primary metal products price index rose 1.7% in March, less than the 2.7% in February. March's increase was primarily due to price increases for aluminum products (+4.9%) and copper and copper alloy products (+4.4%). The continued increase in the price for aluminum is attributable to the current international agreement to cut production. The boom in copper prices is attributable to the beginning of world recovery and seasonal trends. After four months of strong increases in nickel prices, nickel product prices rose by only 0.9%; the increase in aluminum prices, although strong, was a little less than in February.

The automobiles, trucks, and other transport equipment index rose by 0.4% in March, about one-quarter of its February increase. March's increase was primarily attributable to the decline in the value of the Canadian dollar as the export automobile index rose by 0.8%. Domestic automobile prices, however, saw a 0.1% decline.

In March, the paper and paper products index rose 1.0% as both pulp and newsprint prices increased. Domestic sulphate-woodpulp prices rose by 1.2%, export sulphate-woodpulp prices rose by 3.4%, and newsprint prices rose by 1.6%. American newsprint consumption is rising and most U.S. mills are at or near capacity. In addition, woodpulp consumption is rising around the world, although international markets remain very competitive as much capacity remains available.

L'indice des prix des produits métalliques primaires a augmenté de 1,7% en mars, une chute par rapport à 2,7% en février. La hausse était surtout attribuable aux augmentations de prix des produits de l'aluminium (+4,9%) et des produits du cuivre et des alliages de cuivre (+4,4%). La progression soutenue des prix de l'aluminium est attribuable à l'entente internationale actuelle visant la réduction de la production. La montée des prix du cuivre est attribuée au début de la reprise mondiale et aux tendances saisonnières. Après avoir augmenté fortement pendant quatre mois, les prix des produits du nickel ne se sont accrus que de 0,9% en mars; la hausse des prix des produits de l'aluminium, bien que marquée, a été un peu moins élevée qu'en février.

L'indice des prix des voitures, camions et matériel de transport s'est accru de 0,4% en mars, soit environ le quart de l'augmentation observée en février. La dévaluation du dollar canadien explique en grande partie la hausse enregistrée en mars, l'indice des automobiles destinées à l'exportation ayant progressé de 0,8%. Les prix domestiques des automobiles ont cependant chuté de 0,1%.

En mars, l'indice du papier et des produits connexes a augmenté de 1,0%, les prix des pâtes à papier et du papier journal ayant progressé. Les prix domestiques de la pâte au sulfate se sont accrus de 1,2%; les prix à l'exportation de ce produit se sont élevés de 3,4% et ceux du papier journal, de 1,6%. La consommation américaine de papier journal augmente et la plupart des scieries américaines approchent leur capacité de production ou soit déjà ce niveau. De plus, la consommation mondiale de pâte de bois s'accroît bien que les marchés internationaux demeurent très compétitifs, une bonne partie de la capacité mondiale étant toujours disponible.

Highlights

Raw Materials Price Index

Based on preliminary data the Raw Materials Price Index (RMPI,1986 = 100) rose 1.3% in March 1994, to a level of 112.8, marking its third consecutive monthly increase. Major contributors were the price increases of 2.9% for mineral fuels, 2.8% for non-ferrous metals and 1.4% for wood. All other components showed minor price increases, except vegetable products, which did not change. The RMPI excluding mineral fuels was up 1.0% from the previous month, continuing the upward trend that began in November 1993.

In March 1994, the RMPI was 1.1% higher than in March 1993. This modest overall change masks large movements among some groups of commodities. Major increases in the indexes for wood (+13.9%), vegetable products (+16.9%), non-ferrous metals (+10.1%), and ferrous materials (+20.3%) were largely offset by the decline in the mineral fuels index (-18.6%). The RMPI excluding mineral fuels rose 9.4% from March 1993 to March 1994. Since October 1993, the RMPI excluding mineral fuels has increased 6.7%.

The mineral fuels index has declined gradually from May 1993 (105.5) to March 1994 (84.1) with occasional monthly increases. This March saw one of these, up 2.9%. The decrease in the mineral fuels index since March 1993, was due mainly to a 21% decline in crude oil prices.

In March 1994, wood prices posted a fifth consecutive monthly increase (+1.4%). This increase was mainly caused by logs and bolts prices (+1.6%). Year-over-year wood prices were up almost 14%, also due to higher logs and bolts prices (+16.6%). The logs and bolts index reached its all-time high in July 1993 (228.9); declined until October, and then increased steadily to a level of 225.1 in March 1994.

The non-ferrous metals index rose 2.8% in March, mainly because of higher prices for copper concentrates (+7.5%), aluminum materials (+3.1%) and gold (+1.4%). Since October 1993, prices for most of the major non-ferrous metals rose: copper concentrates (+26%), aluminum materials (+24%), gold (+10%), nickel concentrates (+41%), and lead concentrates (+6%). Partially offsetting these increases were prices for zinc concentrates, which showed no change and radio-active concentrates, which declined 6%. The total non-ferrous index has risen 15.3% since October 1993, after falling almost 8% in the preceding 9 months.

Faits saillants

Indice des prix des matières brutes

D'aprés les chiffres préliminaires l'indice des prix des matières brutes (IPMB, 1986 = 100) a augmenté de 1,3% en mars 1994, soit une troisième hausse mensuelle consécutive, pour atteindre le niveau de 112,8. Les combustibles minéraux (+2,9%), les métaux non ferreux (+2,8%) et le bois (+1,4%) ont le plus contribué à cette augmentation des prix. Toutes les autres composantes ont affiché de légères hausses, sauf les substances végétales dont les prix n'ont pas changé. L'IPMB, à l'exclusion des combustibles minéraux, s'est accru de 1,0% par rapport au mois précédent et maintient ainsi la tendance à la hausse qui a débuté en novembre 1993.

En mars 1994, l'IPMB était de 1,1% supérieur à celui de mars 1993. Cette variation globale modérée cache des mouvements importants au sein de certains groupes de produits. On a observé des hausses marquées des indices du bois (+13,9%), des substances végétales (+16,9%), des métaux non ferreux (+10,1%) et des matières ferreuses (+20,3%). Ces hausses ont été grandement atténuées par la chute de l'indice des combustibles minéraux (-18,6%). L'IPMB, à l'exclusion des combustibles minéraux, a augmenté de 9,4% entre mars 1993 et mars 1994. Depuis octobre 1993, l'IPMB, à l'exclusion des combustibles minéraux, s'est accru de 6,7%.

L'indice des combustibles minéraux a chuté progressivement de mai 1993 (105,5) à mars 1994 (84,1), affichant à l'occasion des hausses mensuelles, comme c'est le cas pour le mois de mars (+2,9%). La régression de l'indice des combustibles minéraux observée depuis mars 1993 est surtout attribuable au recul de 21% des prix du pétrole brut.

En mars 1994, les prix du bois ont augmenté pour un cinquième mois consécutif (+1,4%), gain principalement attribuable à la hausse des prix des billes et des billots (+1,6%). D'une année à l'autre, les prix du bois ont progressé de près de 14%, surtout en raison de l'augmentation des prix des billes et des billots (+16,6%). L'indice des billes et des billots a atteint son plus haut niveau en juillet 1993 (228,9); il a chuté jusqu'en octobre pour ensuite progresser continuellement et atteindre le niveau de 225,1 en mars 1994.

L'indice des métaux non ferreux a grimpé de 2,8% en mars, en raison surtout de la hausse des prix des concentrés de cuivre (+7,5%), des matières en aluminium (+3,1%) et de l'or (+1,4%). Depuis octobre 1993, les prix de la plupart des principaux métaux non ferreux ont augmenté : concentrés de cuivre (+26%), matières en aluminium (+24%), or (+10%), concentrés de nickel (+41%) et concentrés de plomb (+6%). Ces hausses ont été en partie atténuées par la stagnation des prix des concentrés de zinc et la baisse de 6% des prix des concentrés radioactifs. L'indice d'ensemble des métaux non ferreux a progressé de 15,3% depuis octobre, après avoir chuté de près de 8% au cours des neuf mois précédents.

The vegetable products index showed no change in March. However, since March 1993, higher prices for grains (+28%), oilseeds (+25.7%) and unrefined sugar (+23.6%), have increased the vegetable products index (+16.9%).

In March 1994, ferrous material prices edged up again (+0.6%). Ferrous material prices were up 20.3% from March 1993, due mainly to higher prices for iron and steel scrap (+32.1%) and iron ore (+9.5%).

L'indice des substances végétales n'a pas changé en mars. Cependant, depuis mars 1993, on a observé une hausse des prix des céréales (+28%), des oléagineux (+25,7%) et du sucre non raffiné (+23,6%), ce qui a fait progresser l'indice des substances végétales de 16,9%.

En mars 1994, les prix des matières ferreuses ont légèrement augmenté (+0,6%). Par rapport à mars 1993, les prix de ces matières se sont accrus de 20,3%, en raison surtout de la hausse des prix des déchets de fer et d'acier (+32,1%) et du minerai de fer (+9,5%).

Note: Indexes for the most recent six months shown are subject to revision

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) This shows the amount by which the movement of each index would move the total in the absence of any change in the other indexes.

(1) Ce chiffre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres indices demeuraient

(2)

These indexes are preliminary. Ces indices sont provisoires.

⁽¹⁾ (1) (2)

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

These indexes are preliminary.

Ces indices sont provisoires.

The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

L'agrégation des indices par produits ou par industries devrait résulter en un même grand total. L'orsque ces totaux différent occasionnellement en raison de l'arrondissement, l'Indice total – Tous les produits devra être considéré comme celui qui fait autorité, et l'Indice total – Toutes les industries manufacturières sera posé égal. (2)

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The bottom line in each series tille block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 14 to 43, 45 to 89) mn indicates the M-level commodity code (from 14 to 43, 45 to 89) nn indicates either a split of the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates special details. pppp indicates the PCG code (except for some special aggregations which include several PCGs).

Tri noticates a split of a PCG.

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E + S) is given, occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order Industrial Product Price Indexes 1981 = 100, Concepts and Methods (Catalogue 62-556). droite, I a ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique prindique le code du niveau M des produits (de 14 à 43, 45 à 69) nn indique soit une composante du niveau M des produits, ou prend la valeur de 91 pour les agrégats spéciaux, ou

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(1) L'aggrégation des indices par produits ou par industries devaient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera

(2)

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industrial Product Price Indexes, 1986 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1986 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about four weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES INDICES DES PRIX INDUSTRIELS

Indices des prix des produits industriels, 1986 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1986. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indices des prix de l'industrie*, paraît quatre semaines environ après le communiqué dans le *Quotidien.* Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette rècle sont signalées.

Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabiliste, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1986. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1986 Input/Output table which, in turn, is derived from 1986 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in production patterns.

Formula

(agg)

 \sum_{i}

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where wⁱ are the values of the output of each commodity:

indicates summation over all elements i in

sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1986. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1986, laquelle à son tour est établie à partir des valeurs de 1986 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle wⁱ sont les valeurs de la production de chaque produit:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| P _{t/o} | denotes the composite price index movement between the base period o and time t for the defined aggregate; | Pt/o | dénote le mouvement de l'indice composite de prix entre la période de référence o et la période t pour l'agrégat défini; |
|------------------|--|------------------|--|
| wi | is the transaction value of the element i in the base period; | wi | est la valeur de transaction de l'élément i au cours de la période de référence; |
| P _{t/o} | is the price index for element i, meaning its price change from the base period to time t; | P _{t/o} | est l'indice de prix de l'élément i, désignant sa variation de prix entre la période de référence et la période t; |
| | | - | |

 \sum_{i}

l'agrégat défini.

(agg)

signifie la sommation de tous les éléments i dans

the defined aggregate.

Historical Data

Historical series on the 1986 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1986-based Industrial Product Price Indexes (IPPI) series and the corresponding 1981-based Industrial Product Price Indexes (IPPI) series, using the year 1986 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both set of IPPI series are available to the public.

Reference Documents

62-558 Industry Price Indexes, 1986 = 100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures.

A glossary of terms is also provided.

Données historiques

Les séries historiques sur la base 1986 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1986 et des séries correspondantes des indices des prix des produits industriels (IPPI) basées sur 1986 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les deux ensembles de séries IPPI sont disponibles au public.

Documents de référence

62-558 Indices des prix de l'industrie, 1986 = 100: Guide aux utilisateurs, 40,00 \$.

Cette publication précise sommairement le contenu économique des séries dans un cadre général, de même qu'une brève description des différentes structures d'agrégation. Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats de produits. Y figurent également une description des caractéristiques des indices élémentaires. La publication contient des commentaires sur l'utilisation des indices.

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, 25,00 \$.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices.

La publication contient également un glossaire.

RAW MATERIALS PRICE INDEXES (1986 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1986 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2009.

These indexes are a continuation of the previously published Raw Materials Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.
